Deployment Services

End-to-end deployment

Your customers need time to adopt new technologies and get their systems into production quickly. Tech Data Global Lifecycle Management (GLM) deployment service experts efficiently implement, migrate and install your technology into your customers' environments, allowing them to realize the benefits of their technological investments from day one. From basic "rack and stack" setup to highly advanced technology deployments and rollouts, GLM excels in providing these services—whether as an extension of your team or as the delivery arm for your channel.

Scalability

Committing your most valuable resources to deployment projects pulls them away from business-critical tasks. Whether your customers want to transform their IT environment through a large-scale technology deployment or transition to the cloud, our skilled and certified engineers design solutions that address your customers' requirements. Scale up or down depending on what you need—and eliminate fixed costs.

Expert team

GLM brings the ideal combination of logistics and technology expertise to every project, allowing you to:

- Mitigate risks associated with the implementation of new technology into the customer environment—and gain access to off-payroll resources

- Reduce customer downtime during larger-scale deployments and transitions with project management, swing gear and training

- Safeguard against hardware issues and other unexpected drawbacks that could otherwise slow down delivery or require additional labor costs

- Leverage the experience of our skilled engineers and more than 2,500 of their combined certifications

Deployment capabilities

GLM's end-to-end deployment capabilities have you covered for implementation, installation and migration.

Implementation

From basic "rack and stack" services to highly advanced implementations of large-scale deployments and rollouts, GLM can handle the most complex solutions across multi-site engagements—giving you the resources you need or allowing you to free the ones you already have to grow your business. This includes:

- Logistics and inventory staging
- Integration services
- Multi-site deployment
- Personal device deployment setup (PC, tablet, IoT)
- Wireless network assessments and deployments

Installation

Installation is the all-important first step in deploying new technology into your customers' IT environment. Effective installations allow your customers to quickly and smoothly implement your new technology. This includes:

- Pre-installation support
- On-site services and multi-site engagements
- Converged and hyperconverged solutions
- Project management

Migration

Whether your customers need data migration from one data center to another or down to the desktop level, GLM's engineers tackle the most robust migration needs. This includes:

- Data consolidation
- Application-specific migrations
- Cloud migration
- Packaging and physical movement of equipment
- Re-installation of equipment and ongoing maintenance

Lifecycle management

Help your customers get the most out of their technology investments with GLM services. Featuring end-to-end product and customer lifecycle services, we'll listen to your needs and devise and implement creative solutions to help you tackle your challenges and achieve your goals. Let us free you up to spend more time focusing on the road ahead.
